SUMMARY

Full-Stack Software Engineer with 5+ years building high-traffic e-commerce systems and AI-powered enterprise tools. I help companies scale customer experiences and broker workflows through React, Node.js, .NET, and Azure: spanning Target's same-day delivery infrastructure to Newmark's production AI leasing platform

WORK EXPERIENCE

Newmark

Dallas, TX

Full-Stack Software Engineer

Oct 2025 – Present

- Architected dynamic interfaces and distributed systems for a leasing application that accelerates broker workflows.
- Engineered and deployed cloud-native microservices using Azure App Services to power enterprise web applications.
- Green-fielded, designed, and shipped to production an AI agency leasing app brokers use to streamline their workflows, freeing up time for revenue-generating workflows (10% of company revenue / ~\$300m).
- Initiate, maintain relationships with, and lead interviews with key stakeholders to increase product adoption and improve development.
- Research product requirements, track and create user stories for all work done.

Target

Minneapolis, MN

Back-End & Front-End Software Engineer

Jun 2020 – Oct 2025

- Owned the \$3.5B same-day delivery flow on Target.com, leading improvements across 6+ micro-frontends to optimize page speed, reliability, and cross-repo deployments, contributing to record holiday conversion rates.
- Integrated real-time backend services (inventory APIs, fulfillment systems) into front-end delivery experiences, maintaining synchronization across top-of-funnel, PDP, cart, account, checkout, etc.
- Collaborated across platform, UX, and fulfillment teams to align system behaviors and customer delivery experiences under peak traffic conditions.
- Completely refactored Target's bottom-of-funnel experience for UX, performance, and code legibility purposes.
- Scoped and redesigned Product Detail Page (PDP) and "Add to Cart" logic, reducing user bounce rate and increasing add-to-cart conversion by streamlining UX and clarifying delivery options.
- Led system design for new checkout pipeline, collaborated with product and backend teams, and supported incident resolution across on-call rotations.
- Scoped, designed, and implemented dynamic phone number add-to-cart feature, which is currently saving \$100k/yr.
- Developed Chef cookbook to create Elasticsearch, Logstash, and Kibana (ELK) instance for SNAP payment logging and deployed it across all payment servers.

SKILLS & TECHNOLOGIES

Languages & Frameworks: Java, Kotlin, Groovy, JavaScript (ES6+), TypeScript, React, Next.js, Node.js, Express.js, Python, .NET, Angular, Spring Boot, HTML5, CSS, and Ruby

Cloud & Infrastructure: Azure, AWS, Docker, Kubernetes, Git, Jenkins, CI/CD

Databases & APIs: PostgreSQL, MySQL, REST API, GraphQL, Kafka, Microservices Architecture

Tools & Practices: Performance Optimization, Latency Reduction, ELK Stack, Grafana, Jest, Jira

EDUCATION

University of Virginia

Charlottesville, VA

B.A. Computer Science | Concentration in Technology Entrepreneurship

2021

Selected Coursework: Entrepreneurial Finance, Foundations of Commerce, Macroeconomics, Startup Operations, Intro to Data Science (Python), Database Systems, Statistical Analysis, Cognition & Cognitive Biases

LEADERSHIP

Management Leadership for Tomorrow (MLT) | Career Preparation Fellow

2019 – 2021

Boy Scouts of America | Eagle Scout

2011 – 2017
